Prepare UHPLC/HPLC samples faster and minimize leachables with the new glass design

The Whatman™ Mini-UniPrep G2 syringeless filter simplifies UHPLC/HPLC sample preparation over the traditional syringe filter method. The Mini-UniPrep G2 is an all-in-one integrated filter that replaces the syringe, syringe filter, glass vial, cap, and septum (see Fig. 1). After the filtration step Mini-UniPrep G2 can be placed directly into the auto sampler in readiness for injecting sample into the UHPLC/HPLC instrument.

Fig. 1: Mini-UniPrep G2 replaces multiple consumables

Features of the Mini-UniPrep G2:
- Consists of an integral borosilicate glass auto sampler vial, plunger with attached filter membrane, and septum/cap
- Filters samples faster compared to the traditional syringe filter method
- Glass construction minimizes the risk of leachables contaminating the sample
- Designed to be loaded directly into the auto sampler
- Includes visual indication that the sample has been filtered
- Minimizes instrument downtime due to unfiltered samples
- Wide range of membranes with 0.2 and 0.45 µm pore sizes to meet specific sample filtration requirements

The Mini-UniPrep G2 includes an integral borosilicate glass vial housed within the plunger (see Fig. 2) and a borosilicate glass chamber for holding the unfiltered liquid. During the filtration step, the plunger is compressed into the glass chamber containing the unfiltered liquid. As the plunger travels downward, liquid flows through the filtration membrane to the top of the plunger and drops into the glass collection vial housed within the plunger (see Fig. 3). Therefore, the sample only contacts plastic for a very short period of time i.e. only while the plunger is being compressed through the unfiltered liquid. Once compressed, the Mini-UniPrep G2 is ready to be loaded directly on to the auto sampler.

Fig. 2: Mini-UniPrep G2 Syringeless Filter

Mini-UniPrep G2 comes in a number of configurations including slit septa for those auto samplers and robotic systems that require a slit septa. It is also available in amber for light sensitive samples. Amber Mini-UniPrep G2 meets the requirements of the US Pharmacopeia (USP) and European Pharmacopeia (EP) for light transmission.
**Technical specifications**

**Dimensions**
- Once compressed, equivalent in size to 12 mm × 32 mm vial

**Materials of Construction**
- Chamber: Borosilicate Glass
- Plunger Outer Housing: Polypropylene
- Plunger Inner Storage Vial: Borosilicate Glass
- Filter Media: As specified
- Septa: Silicone with PTFE Liner
- Cap: Polypropylene

**Maximum Operating Temp.**
- 50°C (122°F)

**Filtering Capacity**
- Chamber (Unfiltered Sample): 500 µl
- Inner Storage Vial (Filtered Sample): 330 µl
- Recommended Minimum Filtering Volume: 220 µl placed in the Chamber to obtain 50 µl in Inner Storage Vial

**Nominal Force Needed to Compress**
- Approx. 25 lbs (11.3 kg)

**Autosampler Compatibility**
- Any autosampler that accommodates standard 12 mm × 32 mm profile vials (Needle height of the autosampler may need adjusting)

**Liquid storage capacity**
