Compact and Simple Automation

Rondolino is a carousel-type titration stand for METTLER TOLEDO general titrators used to automate titrations. It can be loaded with up to 9 sample beakers and one conditioning beaker in a unique position.

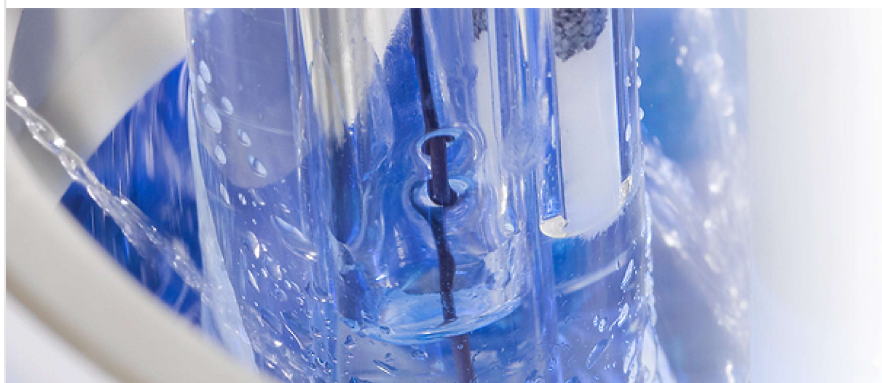

Optimized user guidance

Plug and Play installation and optimized user guidance via a single switch to configure conditioning and rinsing cycles.

Compact, space-saving design

With a footprint of just 25 x 35 cm, Rondolino needs considerably less space than a typical sample changer.

The right washing system for every requirement

The dip rinsing system ensures that carryover does not occur. Electrodes contaminated by sticky or viscous samples are best cleaned using the optional PowerShower™ and membrane pump combination.

Time-saving and secure delegation of simple tasks

Besides series of up to 9 samples, single samples are also more quickly processed because the beakers only have to be placed in the rack. All samples are analyzed in exactly the same way, which significantly improves the reproducibility of the analyses. And when the titration is completed, the electrode is put back into the conditioning beaker.
